PRODUCT OVERVIEW

INTRODUCTION

At Teledyne SP Devices we design and produce high-performance modular data acquisition and signal generation instruments. Our performance advantage is enabled by patented calibration logic, the latest data converters, and state-of-the-art FPGA technology resulting in an unrivalled combination of high sampling rate and resolution.

Our team of experts provide novel digital signal processing (DSP) solutions for a wide range of applications, and the products are equipped with a generous set of application-specific features and real-time DSP. The powerful on-board field-programmable gate arrays (FPGAs) are open to the user and we also provide design services in order to help shorten design time.

SP Devices operate under the Instrumentation segment of Teledyne Technologies which contributed 23% of the total sales of approximately 5.64 billion USD in 2023.

APPLICATIONS

Our products provide performance benefits to a wide variety of applications including LiDAR, time-of-flight mass spectrometry, swept-source OCT, distributed fiber optical sensing, automated test equipment (ATE), big physics, and more.

Customers can develop custom application-specific real-time DSP by using the optional firmware development kit and/or utilize the stand-alone firmware packages for pulse detection, waveform averaging, software defined radio, and ultra-high-speed data transfer.

The software suite include support for multiple programming languages and operating systems as well as drivers and tools for commonly used environments such as LabVIEW™, MATLAB™, and EPICS.

System-level integration is simplified by the availability of many different form factors, and the products offer highly accurate synchronization and trigger capabilities which makes them ideal for multi-channel applications.

OEM CAPABILITIES

At Teledyne SP Devices we understand that the needs of original equipment manufacturers (OEMs) goes beyond high-performance products.

Throughout the years we have built the infrastructure and business models required to support all aspects of OEM business, and we are proud to serve many such customers already today.

Together with world-leading partners we provide cost-efficient high-quality products that are assembled locally in Sweden, and our current production capability supports thousands of boards per month.

Our OEM services include everything from algorithm development and implementation to custom software, firmware, and hardware. We work closely with our customers during all stages of the development cycle to help ensure high-quality results and timely delivery.

14-BIT DIGITIZERS

PRODUCT	RES. (bits)	CHANNEL COUNT	SAMPLING RATE (MS/s)	ANALOG BANDWIDTH (MHz)	COUPLING (AC or DC)	IMPEDANCE (Ohm)	MEMORY (Mbyte)	FPGA (Model)	USB	PXIe	PCIe	MTCA	10GbE
